

PAINTING SERVICE

Paints present the most widely used method of protection of metals against corrosion and rust. Painted products require maintenance after several years of operation. AFW offers a quality paint service procedure and selection of suitable paint materials for each application.

Sand Blasting:

The first step is to remove old paint and rust.
The bare metal should be clean and dry for proper adhesion of the paints.

Standard Paint:

One coat of primer is sprayed on the surface followed by two coats of paint

Durability:

Depending on the operation environment, a variety of paints and thicknesses is possible depending on application, customer specifications and desired life of paint free operation
